gold edge (#FFD700 / #B8860B), Test shelter = blue head + dark-blue edge (#1E90FF / #0A3D7A). The other overlay entries (Pivot & tra bay, Sprayer, Crew route, zones) keep their square swatches since those are lines/bands, not pins.

Relaunch and check: with a field that has shelters + test shelters shown, the legend should list Shelter (yellow pin icon) and Test shelte icon); add/remove a test pin and watch the Test shelter line come and go.

If you'd rather the other overlay entries also use shape-matched icons (e.g. a short line for Crew route / Sprayer, a dashed ring for Pivot instead of squares, say the word — but you specifically asked about the shelter pins, so I kept the rest as-is.

Just have it that if the pin is further south then it is brought to the front and pins further to the n tucked underneath.

Simple, correct z-order rule: draw north→south so the southernmost pin is created last (on top). Since I already decoupled numbering f order, this is a one-line change to the draw sort. Let me find it:

Searched code, edited a file, used a tool >

Committed 3fb9dcb. Pins now draw north → south, so a pin further south is created last and sits on top, with northern pins tucked und no more southern pins' pointers getting hidden by the pin above them. This applies to both regular and test pins together (they share o now), and shelter numbering is unchanged (it still follows the NW-snake order, which I'd decoupled from draw order earlier).

Relaunch and the overlapping pins along that diagonal edge should stack cleanly — each lower pin in front of the one above it.

Lets have the default when you generate pdf for all fields to be d
